

## HCMC FAMILY MEDICINE RESIDENCY PROGRAM

# G3 Ambulatory Pediatric Medicine

## ROTATION SPECIFIC COMPETENCY OBJECTIVES

### By the end of the rotation the resident should be able to:

1. Further develop their competence in the evaluation and management of children seen in outpatient settings for acute, chronic, and preventative visits, as well as undifferentiated illnesses.
2. Apply evidence based, cost conscious strategies to the care of children presenting to outpatient clinics.
3. Provide a comprehensive approach to the medical and psychosocial factors affecting children and families.

### Patient Care

#### Objectives:

#### By the end of the rotation, the G3 resident will:

- Partner with the patient, family and community to improve health through disease prevention and health promotion, including obesity, vaccine schedules, behavior and development, and effective counseling of parents
- Utilize multidisciplinary resources to assist patients and families with undifferentiated signs and symptoms or health concerns
- Facilitate patient and family efforts at self-management of chronic conditions and parenting challenges such as sleep problems, concerns about eating, toilet learning, and school related difficulties

### Medical Knowledge

#### Objectives:

#### By the end of the rotation, the G3 resident will:

- Deepen medical knowledge regarding pediatric outpatient medical care

### Practice-Based Learning and Improvement

#### Objectives:

#### By the end of the rotation, the G3 resident will:

- Identify strengths, deficiencies and limits in the resident's own knowledge and expertise related to pediatric outpatient care
- Incorporate principles of evidence based care and information into clinical practice
